Depending upon the present traffic volume and projected growth, due consideration shall be given to provision initially of Two-lane carriageway and paving of shoulders in the second stage. The Consultant shall also provide a broad assessment of the year in which

four-laning may be required. The Consultant shall also provide sensitivity analysis due to change in assumption of traffic projections.

3.2.4 *Intersection volume count and design*

(a) Volume count

For conducting the intersection volume count, the turning movement traffic surveys shall be carried out as per IRC: SP:41-1994 at all locations where the Project Highway intersects/meets the NH, SH or MDR. (ii) The amount of additional land required, if any, at each of the intersection on the Project Highway shall be clearly stated and brought out.

(iii) For all cases where grade separators without ramps or interchanges with ramps are proposed, the possibility of their provision on the Project Highway in a phased manner shall be duly examined and a report on the cost-effectiveness of the Consultant's proposal submitted for consideration of the Authority to enable it to specify such requirements in the relevant Schedules of the Concession Agreement.

3.2.5 *Pedestrian/Cattle crossing demand assessment*

For assessing the requirements of Pedestrian/Cattle crossings, the traffic counts for two continuous days between 08.00 hours and 20.00 hours shall be carried out at the locations close to all habitations/settlements along the Project Highway. The data so collected shall be analysed to determine whether

any pedestrian/cattle crossing by way of underpass/overpass is justified. If so, the locations and broad layout shall be proposed.

3.2.6 *Axle load spectrum surveys*

Axle load spectrum surveys shall be carried out at each proposed location of toll plaza on the Project Highway. The axle load survey shall capture buses, trucks and tractors with trailers in the traffic stream. The survey shall be for both directions. The activities and deliverables forming part of the topographic, alignment and land use survey are described below (see also Attachment A to the TOR):

- (a) Divide the Project Highway into various stretches as per terrain classification
- (b) Identify sections of Project Highway which fall within marine environment (Condition of severe marine environment: alternate wetting and drying due to sea spray; alternate wetting and drying combined with freezing; buried in soil having corrosive effect; members of structures in contact with water where the velocity of flow

and the bed material are likely to cause erosion of concrete. Moderate marine environment would be other than severe).

- (c) Identify sections of Project Highway which fall within urban limits and need four laning in accordance with the Manual (see para 3.4).
- (d) Identify sections of Project Highway which require raising. Such sections will be identified with attention being paid to the previous history of submergence and the extent to which the subgrade is likely to be affected by the capillary action if the section is not raised.
- (e) As far as possible, the existing alignment would be retained subject to the following requirements:
 - (i) Identify stretches which do not meet the criterion of ruling design speed, i.e. where radii of horizontal curves are less than desirable minimum. Prepare realignment plans for improving geometrics in such stretches.
 - (ii) Identify stretches out of (i) above, which meet the criterion of minimum design speed, i.e. where the radii of horizontal curves are more than the absolute minimum (This will enable the Authority to take a view on whether to include such stretches for improving geometrics in the initial stage or these can be postponed by a few years and in the meantime steps can be taken to acquire the necessary land for the ROW).
 - (iii) Identify stretches where stopping sight distance is not available. Work out possible improvement plan to increase the sight distance to provide overtaking sight distance. Also work out option to increase the sight distance to provide at least the intermediate sight distance.
 - (iv) Identify stretches, other than those in (iii) above, where intermediate sight distance is not available. Work out possible improvement plan to increase the sight distance to provide overtaking sight distance. Also work out possible improvement plan to increase the sight distance to provide at least the intermediate sight distance.
 - (v) Identify stretches where the gradients are steeper than the ruling gradient for the relevant terrain condition. Work out and prepare an improvement plan for the vertical alignment in such stretches.

Divide improvement plans of such stretches into the following two parts:

- Stretches where gradient is more than the limiting gradient
 - Stretches where gradient is more than the ruling gradient but less than the limiting gradient. (The Authority can take a view on whether improvements of stretches in this category shall be taken up or not.)

- (f) Identify stretches involving construction of new bridges and other grade separated structures including those requiring reconstruction and their approaches. Work out proposal for location of such structures and alignment of approaches.
- (g) Based on the improvement plans of horizontal and vertical alignment worked out as a result of tasks in (d), (e) and (f), prepare alignment plans, L-Sections and cross-sections of the entire Project Highway. Scale of drawings shall be as per IRC:SP:19. Proposed improvements shall be marked on the plans. Such improvements will include raising of road, widening of roadway, widening of existing carriageway, provision of shoulders – both paved and granular, new structures, underpasses, grade separators, service roads, additional road signs, road furniture, safety devices, relocation of utilities, removal of trees, etc.
- (h) Also prepare a separate Land Plan of the Project Highway showing the existing ROW (alongwith all the existing assets within the ROW e.g. structures, drains, service roads, trees, utilities and safety devices) and proposed additional land required in various stretches for improvement of geometrics, construction of new structures, provision of intersections, interchanges, service roads, toll plazas, project facilities, etc. The Land Plan should also show encroachments, if any. A list of such encroachments alongwith their brief description shall also be prepared and included in the Feasibility Report.

For each of these stretches, the Consultant shall prepare an improvement plan of the stretch to provide a four-lane divided carriageway with footpaths, covered drains, etc. Possibility of providing service roads shall also be explored and indicated. If there is any constraint due to available ROW or additional land to be acquired, the same shall be

brought to the attention of the Authority on immediate basis. In such situations, a bypass may be needed to avoid the urban area. The surveys and investigations for the alignment and other features of the bypass are a part of this Consultancy.

3.5 ***ROBs/RUBs***

The Consultant shall identify all locations of the existing railway level crossings on the Project Highway. Data regarding number of closures per day shall be provided. Normally, all level crossings are to be replaced with ROBs/RUBs. However, the Consultant may propose retention of such railway crossings which are on sidings etc. where it would not be cost-effective to replace them with ROBs/RUBs. The Consultant shall prepare and submit indicative GADs of the proposed ROBs/RUBs including viaduct portion in the approaches based on preliminary consultation with the railway authorities concerned. (The GAD of ROBs/RUBs existing or under construction in the vicinity of the Project Highway could also be kept in view).

It shall be responsible for the accuracy of the physical details such as alignment, right of way, abutting land use, assets within the right of way including safety devices, utilities, trees, service roads, cross drainage structures, etc. The layout and preliminary designs shall be supplemented with explanatory drawings, statements, charts, notes as necessary.

3.14 ***Project Cost***

The Consultant shall work out indicative BOQ of various components and prepare rough cost estimates of the Project Highway with a break up of cost for each component separately. To the construction cost so arrived at, the Consultant may add 25% thereof as a lumpsum provision for physical and price contingencies, interest during construction and other financing costs, pre-construction expenses etc.

3.15 ***Financial Analysis and Bid Process***

3.15.1 Detailed financial analysis is not required to be undertaken by the Consultant. However, the Consultant shall provide the estimated construction costs, operation and maintenance costs, traffic forecast, toll revenues etc. as part of its preliminary financial analysis and appraisal of the Project. The Consultant shall, also provide a preliminary assessment of the financial viability of the Project with a view to estimating the likely IRR over a concession period of 10 years, 15 years, 20 years and 25 years respectively. It shall also provide assistance during the Bid Process for selection of the Concessionaire.

3.15.2 While undertaking the financial analysis and projecting the IRR, the following assumptions shall be adopted:

- (a) Capital cost shall be adopted as per estimates of construction cost to which 25% shall be added for physical and price contingencies, interest during construction, other financing costs etc;
- (b) debt equity ratio may be assumed as 70:30;
- (c) O&M costs may be assumed as per norms of the Authority;

- (d) the concession period may be fixed by reference to the year in which the projected traffic would exceed the design capacity of the Project Highway; and
- (e) growth rate of traffic may be assumed at 5% per annum.

3.15.3 The Consultant shall:

- (a) calculate the NPV and EIRR for the Project. It will undertake sensitivity analysis by identifying the most critical factors and determine their impact on the EIRR, including varying project costs and benefits, implementation period, and combinations of these factors; and
- (b) conduct a risk analysis (using the Monte Carlo method) by considering the possible values for key variables based on records, and their occurrence probability.

3.15.4 If the IRR of the Project, based on the aforesaid calculations is less than 12%, an effort should be made to reduce the capital costs in consultation with the Authority. This may be done either by omitting/ modifying some of the proposed structures or by phasing them after a period of seven years or more, such that the IRR reaches a minimum of 12%.

4. Deliverables

The Consultant shall deliver the following during the course of this Consultancy. The deliverables shall be so drafted that they could be given to the prospective bidders for guidance in preparation of their bids. Twenty hard copies and two soft copies in CDs of all the final reports, drawings, etc. shall be submitted to the Authority. For draft reports only five hard copies and one soft copy in CD shall be submitted to the Authority. The size of drawings shall be A-3 (maximum).

A. Inception Report

On commencement of the Consultancy, the Consultant shall prepare and submit an Inception Report. The Inception Report shall be a further

elaboration of the Consultant's submissions towards understanding of the RFP and the Work Plan. The Inception Report shall also include the Consultant's proposal regarding the proposed locations of toll plazas and traffic survey stations (refer paras 3.2.1 and 3.8).

Within a period of four weeks of submission of the Inception Report, the Consultant shall submit a Supplementary Inception Report where it must clearly spell out the broad strategy for structuring the project in a manner that would restrict the likely viability gap funding to a level not exceeding 20% of the capital cost of the project assuming an IRR of 12%. In making this assessment, the Consultant shall follow the assumptions specified in paragraph 3.15 above. In particular, the Consultant must make realistic assumptions about the traffic projections and the resulting revenue streams with a view to making an assessment of the capital cost that can be sustained by such revenues. For this purpose, the Consultant shall undertake a 7-day classified traffic volume count and a topographic survey to identify geometric improvements, new bridges etc. The project components should be so formulated as to make the project viable.

In determining its aforesaid strategy, the Consultant shall also seek the advice of the Authority. In the event that a viable project does not seem feasible, the Consultant shall not proceed with the Consultancy and the same shall stand terminated. The Consultant shall be entitled to a payment of 10% of the Agreement Value upon such termination.

B. Report on Alignment and First Traffic Survey

- (a) The Consultant shall undertake topographic survey of the Project Highway, identify geometric deficiencies and construction of new bridges and other grade separated structures (refer para 3.3.2) and submit a Report on the alignment together with proposed geometric improvements. The Consultant shall finalise the alignment after taking into account the comments of the Authority on the Report on Alignment. The work of preparing cross-sections and Land Plans, etc. shall be undertaken based on the finalised alignment.

SCHEDULE-3

(See Clause 2.3.3)

Guidance Note on Conflict of Interest

1. This Note further explains and illustrates the provisions of Clause 2.3 of the RFP and shall be read together therewith in dealing with specific cases.
2. Consultants should be deemed to be in a conflict of interest situation if it can be reasonably concluded that their position in a business or their personal interest could improperly influence their judgment in the exercise of their duties. The process for selection of consultants should avoid both actual and perceived conflict of interest.
3. Conflict of interest may arise between the Authority and a consultant or between consultants and present or future concessionaries/ contractors. Some of the situations that would involve conflict of interest are identified below:
 - (a) Authority and consultants:
 - (i) Potential consultant should not be privy to information from the Authority which is not available to others.
 - (ii) Potential consultant should not have defined the project when earlier working for the Authority.
 - (iii) Potential consultant should not have recently worked for the Authority overseeing the project.
 - (b) Consultants and concessionaires/contractors:
 - (i) No consultant should have an ownership interest or a continuing business interest or relationship with a potential concessionaire/ contractor.
 - (ii) No consultant should be involved in owning or operating entities resulting from the project.
 - (iii) No consultant should bid for works arising from the project.

The participation of companies that may be involved as investors or consumers and officials of the Authority who have current or recent connections to the companies involved, therefore, needs to be avoided.

4. The normal way to identify conflicts of interest is through self-declaration by consultants. Where a conflict exists, which has not been declared, competing companies are likely to bring this to the notice of the Authority. All conflicts must be declared as and when the consultants become aware of them.
5. Another approach to avoiding a conflict of interest is through the use of “Chinese walls” to avoid the flow of commercially sensitive information from one part of the consultant’s company to another. This could help overcome the problem of availability of limited numbers of experts for the project. However, in reality effective operation of “Chinese walls” may be a difficult proposition. As a general rule, larger companies will be more capable of adopting Chinese walls approach than smaller companies. Although, “Chinese walls” have been relatively common for many years, they are an increasingly discredited means of avoiding conflicts of interest and should be considered with caution. As a rule, “Chinese walls” should be considered as unacceptable and may be accepted in exceptional cases upon full disclosure by a consultant coupled with provision of safeguards to the satisfaction of the Authority.
6. Another way to avoid conflicts of interest is through the appropriate grouping of tasks. For example, conflicts may arise if consultants drawing up the terms of reference or the proposed documentation are also eligible for the consequent assignment or project.
7. Another form of conflict of interest called “scope–creep” arises when consultants advocate either an unnecessary broadening of the terms of reference or make recommendations which are not in the best interests of the Authority but which will generate further work for the consultants. Some forms of contractual arrangements are more likely to lead to scope-creep. For example, lump-sum contracts provide fewer incentives for this, while time and material contracts provide built in incentives for consultants to extend the length of their assignment.
8. Every project contains potential conflicts of interest. Consultants should not only avoid any conflict of interest, they should report any present/potential conflict of interest to the Authority at the earliest. Officials of the Authority involved in development of a project shall be responsible for

identifying and resolving any conflicts of interest. It should be ensured that safeguards are in place to preserve fair and open competition and measures should be taken to eliminate any conflict of interest arising at any stage in the process.
